

FILTER REMINDER

Did you know that changing your filters can reduce your utility expense and lengthen the life of the heating and air conditioning system?

We suggest that you change all filters at least every other month. The more frequent you change them the more it pays off. Failure to do so could result in damage to the system.

Filters are inexpensive and can be purchased at home improvements stores. It is the responsibility of the tenant to purchase and change all filters.

Charges may be added to your account if clogged filters are found during an inspection.
